## Cutting blades – Optimisations - Directly by the manufacturer -

Further optimisations towards the well known  
designs T20, T21, T22

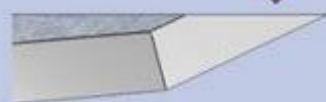

T20 - 26.64.313

T21 - 26.64.314

T22 - 26.64.315

Models T20, T21 and T22 (26.64.313, 26.64.314, 26.64.315) are commonly in use for fine details, short cutting lengths and tight radii – always with possible risk of fast abuse of blade tip, break out of cutting edge or breaking of tip itself

**Modified versions – longer service life  
– sharper layouts – higher productivity**

T20-2 - 26.64.313-2

T20-7 - 26.64.313-7

T20-8 - 26.64.313-8

T21-2 - 26.64.314-2

T22-1 - 26.64.315-1

- More stable tip design
- Less prone for breaking
- Higher infeed speed possible
- Less abuse of cutting underlay
- Reduced conical shape of tight radias
- Less pre-cut

**Always the best solution! Cut well with LESYK:**

**Corrugated, Corrugated plastic, Corrugated sandwich, Sandwich board, Foam board, Folding Carton, Magnetic foil, Polyester fabric, Rubber, Felt, Foam**
